

Make sure it's a Cane Toad!!

Bumpy leathery skin
General brown and
yellowish colour,
never any green

Large Paratoid
Gland on the
shoulders

Partial Webbing
between the toes

Bony ridge
(rostrum) across
the eye to the
snout.

Cane Toads should be
removed from your local
environment where
possible. But first you
need to make sure
it is a Toad.

The underside of the rear foot is
different to that of native frogs.
